WormLocker 2.0 Ransomware "Execute and observe"

A Comprehensive Study of Ransomware Detection Using
Sysmon, Winlogbeat, and ELK Stack Monitoring Infrastructure

Author: Brahmi Sarah Kaouther

1. Monitoring Infrastructure Validation

Prior to malware execution, the monitoring infrastructure was systematically validated to ensure comprehensive visibility. The Sysmon service was verified as operational using the `Get-Service Sysmon64` command, confirming real-time system activity monitoring. Concurrently, the Winlogbeat service was confirmed active via `Get-Service winlogbeat`, ensuring proper log forwarding capabilities from the victim machine to the Elasticsearch monitoring platform.

2. Baseline Event Monitoring

A baseline of system activity was established using `Get-WinEvent -LogName "Microsoft-Windows-Sysmon/Operational"` to capture all Sysmon-detected events. This provided visibility into timestamped activities, event identifiers, and detailed event information, creating a reference point for normal system behavior prior to malware introduction.

The screenshot shows a Windows PowerShell window titled "Administrator: Windows PowerShell" running in a virtual machine named "windows_victim (snapshot_final)". The window displays the output of several commands:

```
PS C:\Windows\system32> Get-Service Sysmon64
```

Status	Name	DisplayName
Running	Sysmon64	Sysmon64

```
PS C:\Windows\system32> Get-Service winlogbeat
```

Status	Name	DisplayName
Running	winlogbeat	winlogbeat

```
PS C:\Windows\system32> Get-WinEvent -LogName "Microsoft-Windows-Sysmon/Operational"
```

ProviderName: Microsoft-Windows-Sysmon

3. Ransomware-Relevant Event Filtering

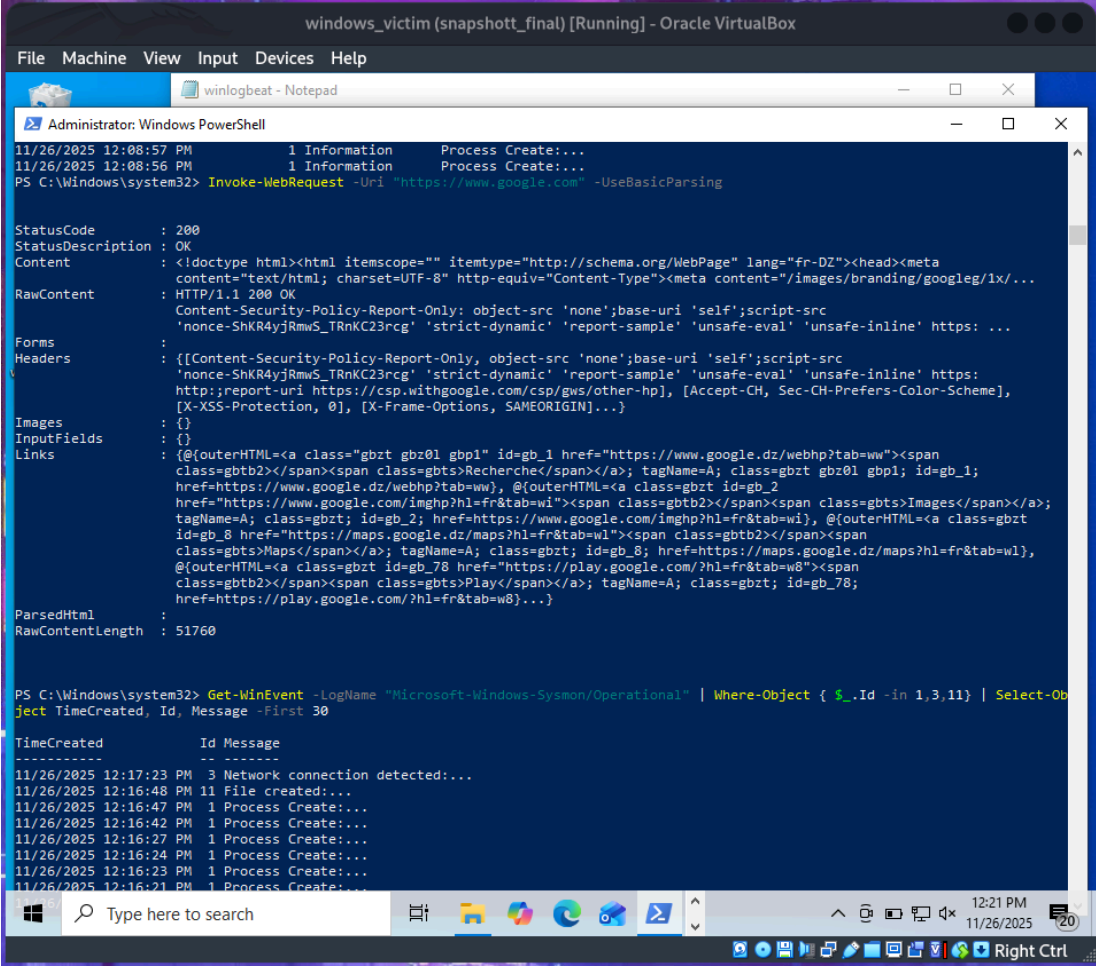

Focus was directed toward three critical Event IDs most commonly associated with ransomware behavior:

Event ID 1: Process creation

Event ID 3: Network connections

Event ID 11: File creation activities

A controlled network connection test was performed using `Invoke-WebRequest -Uri "https://www.google.com"` to validate Event ID 3 detection capabilities. Event filtering was implemented via `Get-WinEvent -LogName "Microsoft-Windows-Sysmon/Operational" | Where-Object {$_.Id -in 1, 3, 11} | Select-Object TimeCreated, Id, Message -First 30` to isolate these key indicators.

The screenshot shows a Windows PowerShell window titled "Administrator: Windows PowerShell" running in a virtual machine named "windows_victim (snapshot_final)". The window displays the output of the `Invoke-WebRequest` command, which returns the HTML content of `https://www.google.com`. The output includes status code 200, content type text/html, and various headers and links. Below the web request output, the command `Get-WinEvent -LogName "Microsoft-Windows-Sysmon/Operational" | Where-Object {$_.Id -in 1,3,11} | Select-Object TimeCreated, Id, Message -First 30` is executed, displaying a list of 30 event logs. The events are filtered by ID (1, 3, 11) and sorted by TimeCreated. The events show network connections, process creation, and file creation activities.

4. Centralized Security Monitoring via Elasticsearch

The Elastic Stack monitoring infrastructure was leveraged to conduct comprehensive analysis of security events collected from the victim machine. Through targeted Elasticsearch API queries, the three critical event types indicative of ransomware behavior were systematically examined:

Elasticsearch queries were executed for each key event category to extract and analyze security events forwarded by Winlogbeat:

Process Creation Events (ID 1):

```
sarah_brahmi06@kali:~$ curl -s -X GET "http://localhost:9200/.ds-winlogbeat-9.2.1-2025.11.25-000001/_search" -H "Content-Type: application/json" -d '{
  "query": {
    "term": {
      "winlog.event_id": "1"
    }
  },
  "sort": [{"@timestamp": {"order": "desc"}},
  "size": 5
}
| jq '.hits.hits[] | {source: .@timestamp, event_id: .winlog.event_id, process: .winlog.event_data.Image, command: .winlog.event_data.CommandLine}'

{
  "timestamp": "2025-11-27T01:08:44.911Z",
  "event_id": "1",
  "process": null,
  "command": null,

  "timestamp": "2025-11-26T18:10:47.760Z",
  "event_id": "1",
  "process": "C:\\Windows\\System32\\WindowsPowerShell\\v1.0\\powershell.exe",
  "command": "\"C:\\Windows\\System32\\WindowsPowerShell\\v1.0\\powershell.exe\" *

  "timestamp": "2025-11-26T18:10:42.412Z",
  "event_id": "1",
  "process": "C:\\Windows\\System32\\consent.exe",
  "command": "consent.exe 280 468 0000013041057530

  "timestamp": "2025-11-26T18:10:27.099Z",
  "event_id": "1",
  "process": "C:\\Windows\\System32\\SecurityHealthHost.exe",
  "command": "C:\\Windows\\System32\\SecurityHealthHost.exe {08728914-3F57-4D52-9E31-49DAECA5A80A} -Embedding"

  "timestamp": "2025-11-26T18:10:24.780Z",
  "event_id": "1",
  "process": "C:\\ProgramData\\Microsoft\\Windows Defender\\Platform\\4.18.25100.9008-0\\MpCmdRun.exe",
  "command": "\"C:\\ProgramData\\Microsoft\\Windows Defender\\Platform\\4.18.25100.9008-0\\MpCmdRun.exe\" GetDeviceTicket -AccessKey 04ECBCBF-6F7E-97DC-3780-A745E3E93A5C "
```

Network Connection Events (ID 3):

Similar API queries targeted network activity (`winlog.event_id: "3"`) to identify any command-and-control communications, data exfiltration attempts, or external resource connections.

```

(sarah_brahmi06@kali)-[~]
$ curl -s -X GET "http://localhost:9200/.ds-winlogbeat-9.2.1-2025.11.25-000001/_search" -H 'Content-Type: application/json' -d '
{
  "query": {
    "term": {
      "winlog.event_id": "3"
    }
  },
  "sort": [{"@timestamp": {"order": "desc"}}],
  "size": 5
}
| jq '.hits.hits[]._source | {timestamp: .@timestamp, event_id: .winlog.event_id, process: .winlog.event_data.Image, command: .winlog.event_data.CommandLine}'

{
  "timestamp": "2025-11-26T18:17:23.453Z",
  "event_id": "2",
  "process": "C:\\Windows\\System32\\WindowsPowerShell\\v1.0\\powershell.exe",
  "command": null
}

{
  "timestamp": "2025-11-26T18:09:48.522Z",

{
  "timestamp": "2025-11-26T10:47:37.731Z",
  "event_id": "3",
  "process": "C:\\Users\\victim\\AppData\\Local\\Microsoft\\OneDrive\\OneDrive.exe",
  "command": null
}

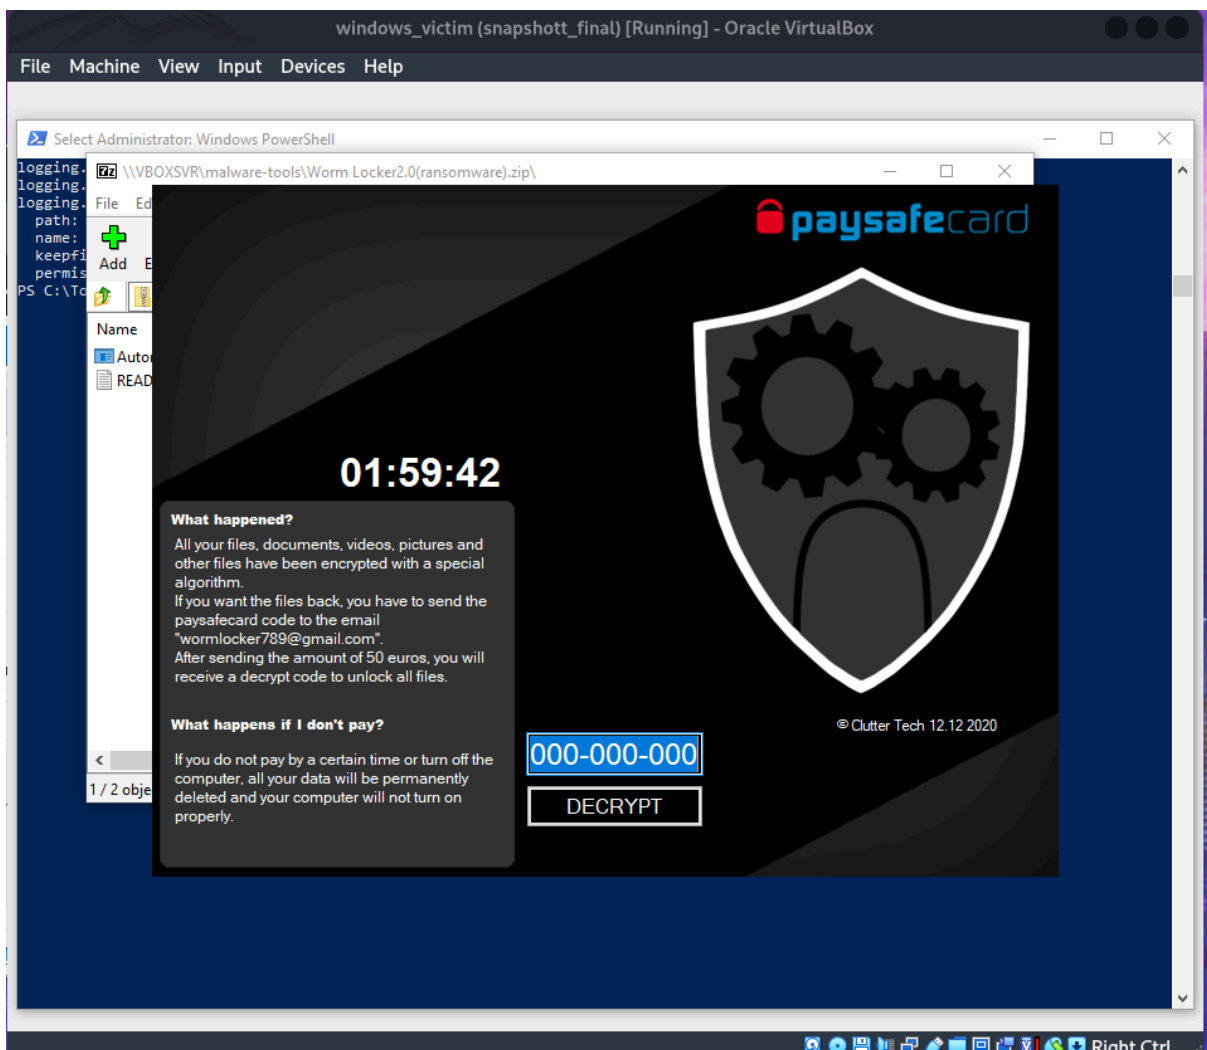

```

File Creation Events (ID 11):

File system modifications were tracked through Event ID 11 analysis (`winlog.event_id: "11"`) to detect ransomware encryption patterns, ransom note generation, or suspicious file system activity.

```
sarah_brahmi06@kali: ~  
$ curl -s -X GET "http://localhost:9200/.ds-winlogbeat-9.2.1-2025.11.25-000001/_search" -H 'Content-Type: application/json' -d '{  
  "query": {  
    "term": {  
      "winlog.event_id": "11"  
    }  
  },  
  "sort": [{"@timestamp": {"order": "desc"}},  
  "size": 5  
  | jq '.hits.hits[]._source | {timestamp: .@timestamp, event_id: .winlog.event_id, process: .winlog.event_data.Image, command: .winlog.event_data.CommandLine}'  
  {  
    "timestamp": "2025-11-26T18:19:17.099Z",  
    "event_id": "11",  
    "process": "C:\\ProgramData\\Microsoft\\Windows Defender\\platform\\4.18.25100.9008-0\\MsMpEng.exe",  
    "command": null  
  },

    "command": null  
  }  
}'  
- (sarah_brahmi06@kali) [~]
```

5. Ransomware Execution

6. Post-Execution Analysis

Following ransomware deployment, Elasticsearch queries were repeated for Event IDs 1, 3, and 11. Comparative analysis revealed that only Event ID 1 (process creation) showed significant activity, indicating the ransomware's operational characteristics: it initiates processes but does not establish network connections or create new files, instead focusing on encrypting existing files without deletion.

```
(sarah_brahmi06@kali)~$ curl -s -X GET 'http://localhost:9200/.ds-winlogbeat-9.2.1-2025.11.25-000001/_search' -H 'Content-Type: application/json' -d '{

7. Visualization via Kibana

The Kibana web interface provided additional monitoring capabilities, offering real-time visualization of Elasticsearch data through interactive dashboards and automated alerting mechanisms for enhanced situational awareness during the malware analysis.
